BAKER RUSKINN USERS WIN NOBEL PRIZE

Stem cell

The 2019 Nobel Prize in Physiology or Medicine 2019 was awarded jointly to William G. Kaelin Jr, Sir Peter J. Ratcliffe and Gregg L. Semenza for their discoveries of how cells sense and adapt to oxygen availability To make breakthroughs in science even the best scientists need tools to make history. For Sir Peter J. Ratcliffe and his team, one of the tools central to his research was provided by Baker Ruskinn.

HRE

Oxygen in cells the right dosage

Baker Ruskinn's physoxia/hypoxia workstations combine the features of a workstation and an incubator and therefore function as a comprehensive lab in a box. Providing stable and user defined atmospheric conditions controlling oxygen, carbon dioxide, temperature and humidity they support your research under physiological conditions. The choice between different options and accessories enables you to construct a workstation that perfectly fits your needs and supports your cellular studies.

InvivO₂® 300 Workstation

Small physoxic workchamber and animal hypoxic incubator

Designed to study even the most complex cell interactions under perfect hypoxic or anoxic conditions: The workstation provides accurate, stable, and user-defined oxygen, carbon dioxide, temperature and humidity control, creating the optimal environment for cell culture and translational research.

InvivO₂® 400/500 Workstation

Modern physoxic/hypoxic workchamber for research

dioxide, temperature and humidity. The InvivO₂® provides physiological culture conditions for cells of all types in the low oxygen range in a predefined atmosphere. It is both an incubator and a sterile workbench of the latest design with new oxygen measurement technology.

InvivO₂® 1000 Workstation

Modern dual pyhsoxic/hypoxic workchamber

Gives precise control over oxygen, carbon Gives precise control over oxygen, carbon dioxide, temperature and humidity. The InvivO.® provides physiological culture conditions for cells of all types in the low oxygen range in a predefined atmosphere. It is both an incubator and a sterile workbench of the latest design with new oxygen measurement technology.

> The InvivO₂[®] Dual does not only provide doubled space but also allows you to operate two different atmospheric conditions, one for each chamber.

SCI-tive Workstation

The SCI-tive was designed as a "Lab in a box" to create in vitro conditions for a continuously stable, physoxic or hypoxic cell culture environment. This simulates the physiological conditions in the tissue in terms of oxygen and carbon dioxide content, temperature and pH very well. Cellular stress caused by fluctuations is preven-

SCI-tive Quad Workstation

The SCI-tive QUAD is a complete "lab in a box", giving you an accurate and stable environ-

Spacious physoxic/hypoxic workchamber in research with analytical devices

SCI-tive Dual Symmetrical/ Asymmetrical Workstation

Two or three big physoxic/hypoxic workchambers for ambitious project development

The SCI-tive was designed as a "Lab in a box" to create in vitro conditions for a continuously stable, physoxic or hypoxic cell culture environment. This simulates the physiological conditions in the tissue in terms of oxygen and carbon dioxide content, temperature and pH very well. Cellular stress caused by fluctuations is prevented.

PhO₂x Box Cell culture system

Low budget incubator for controlled low O₂ atmosphere conditions. A Gas Controller mixes the wanted hypoxic atmosphere and is connected to an acrylic Cell Culture Chamber This is available in two sizes, choice in black or clear. Designed for cell cultures using plates, petri dishes and T-flasks. Compatible for inside SCI-tive usage.

OxyGenie

Accessible mobile oxygen control

The OxyGenie is a culture system allowing for the transport of cells under hypoxic conditions. This portable system is equipped with a continuous hypoxic environment for short term physiological oxygen and temperature studies. It is ideal for conducting high resolution microscopy or irradiation under physiological oxygen conditions.

Laboratory under hypoxic atmosphere

mental control, simulating "in-vivo" conditions. Delivering constant cell culture conditions and research under a controlled atmosphere for Cell Therapy and Stem cell research. The QUAD can be adapted to individual needs.

VelO_ax Animal

Modeling chamber

The VelO_ax system is an optimal tool for all short-term animal experiments about hypoxia or that require a rapid change in oxygen concentration. Available as 2 cage (66 l) or 1 cage (31 l) option.

CondoCell®

Portable containment control

CondoCell[®] is an isolation box for sensitive cell cultures in T-flasks, Petri dishes or multiwell plates. It captures the environment of any incubator or physoxic workstation making continuous, uninterrupted culture possible.
